## Literature review

In the **INTRODUCTION** section, an overview of the world's scientific publications is presented. It confirms the absence of a solution to the problem in literary sources and indicates predecessors on whose studies the work is based. The literature review should be a critical analysis of scientific publications. It must justify (motivate) the need for research, done by the author of the article. From the literature review follows the formulation of the study's relevance. In this section, the author describes the research subject and lists its parameters in numerical and/or logical values. The aim and objectives of the research are formulated.

## Requirements for completeness and representativeness of the list of REFERENCES

- 1. Number of references. The list of references should include at least 20 scientific publications available to a wide range of English-speaking readers. Available publications are:
  - 1.1. Scientific publications indexed in Scopus or Web of Science databases. Such publications in the list of references should be at least 12.
  - 1.2. Open access scientific publications in English in peer-reviewed scientific sources.
  - 1.3. Open access scientific publications and patents in a language other than English in peer-reviewed scientific sources and have English-language metadata (source name, title of the article, author's data, abstract, key words, list of references) links to the publication.
  - 1.4. Interstate or normative English-language documents used in many states.
- 2. Other sources beyond the minimum of 20 sources are recommended to be included in the list of references in exceptional cases.
- 3. References should not include educational literature (textbooks, teaching aids, etc.).
- 4. The composition of sources should be up-to-date and contain at least 8 articles from scientific journals not older than 10 years, 6 of them not older than 3 years.
- 5. Within the limits of self-citation, there should not be more than 5 sources among sources, the authors or co-authors of which are the authors of the article.
